Workshop Real Life Statistic

8.5%

National Market Share
achieved in Indonesia
(2025)

70,000+

Retail Sales Units
recorded within a
single calendar year

Despite intensive market challenges, Mitsubishi Motors successfully increased its commercial footprint. This high-volume acquisition means that the cumulative pool of vehicles requiring downstream service compounding grows exponentially year-over-year.

297

Total Authorized Dealers &
Service Centers nationwide

Mitsubishi relies on a network of just 297 authorized centers to service the entire national fleet; Out of these 297 locations, not all facilities are equipped to handle complex mechanical services, paint, or advanced component repairs.

High Ratio Imbalance

The massive volume mismatch creates an intense administrative burden directly on field mechanics. Technicians spend significant fractions of their billable hours searching and procuring components rather than fixing vehicles.

This has not factor in that workflow bottleneck intensifies drastically prior to major national festive events, such as Mudik / Lebaran and Christmas holidays.

A Bottleneck

Time is Money

Mechanics have to traverse a complex system, navigate complex catalogs, decoding manuals, then checking stock.

This causes slower processes in maintenance, delayed repairs, frustrated customers.

Real Life Example

Bob is a mechanic in Mitsubishi Service Center in Sunter, it is a Saturday, it is a busy floor today, a lot of customers enter at the start of the day requiring daily maintenance.

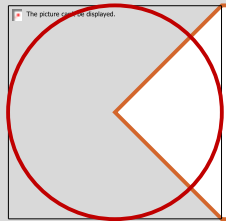

He has to match parts of **Each** car that enters while working on it, while the clock ticks away.

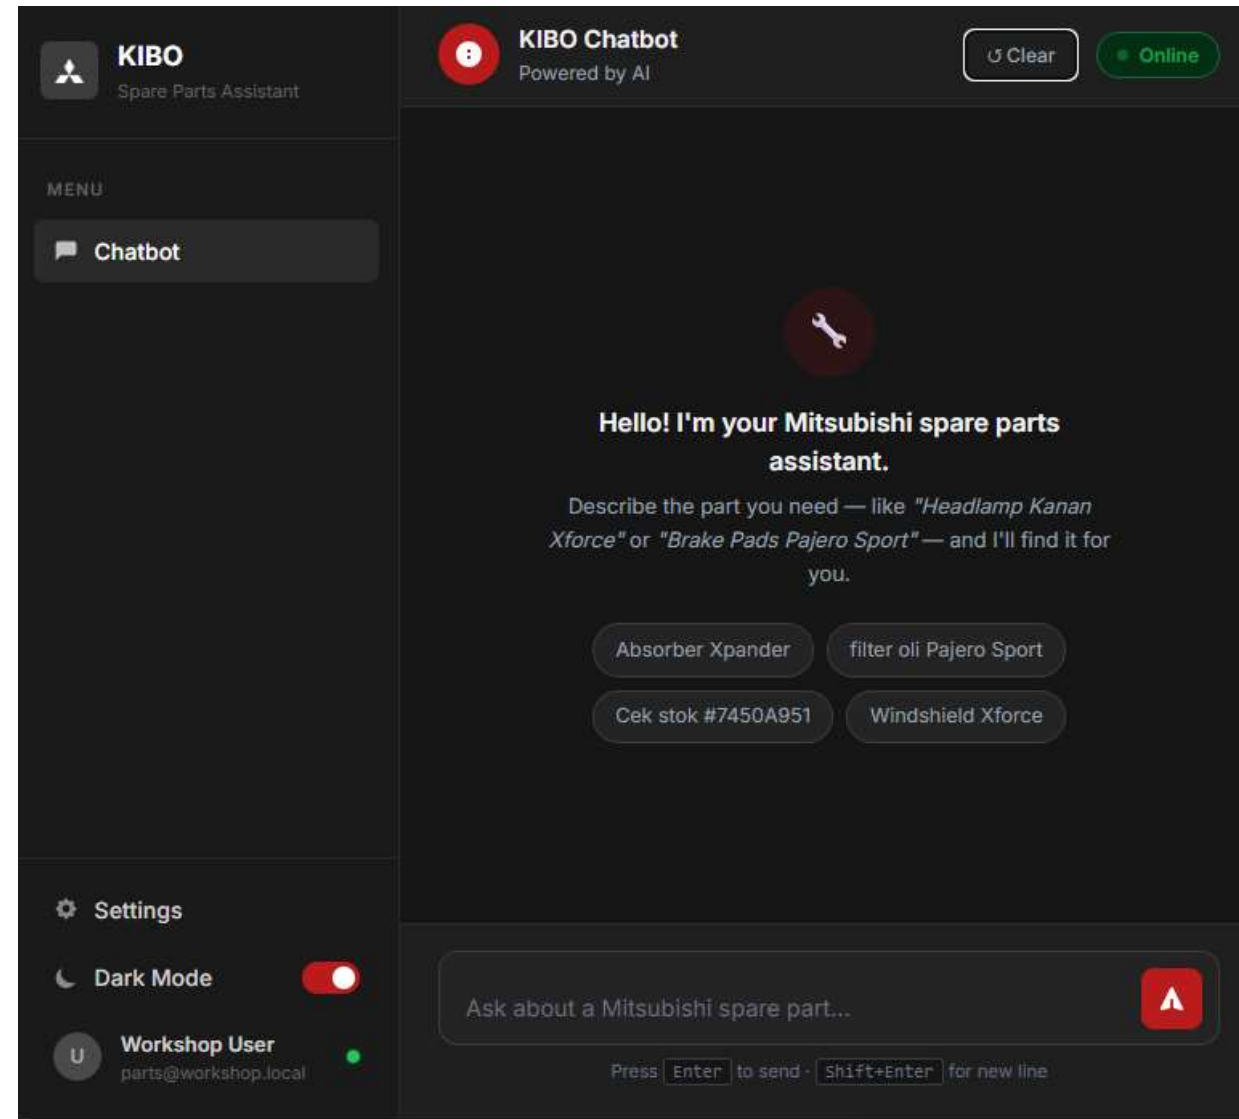

Solution : KIBO

Agentic AI-
Driven

- Natural Language Processing : Users simply write or voice what component is wanted from the vehicle in text.
- Automated Execution : KIBO parses the intent, queries semantic asset documentation, automatically locates the specific part ID, and validates live warehouse stock inventory.
- Faster Allocation : Mechanized stock allocation takes seconds instead of manual hours

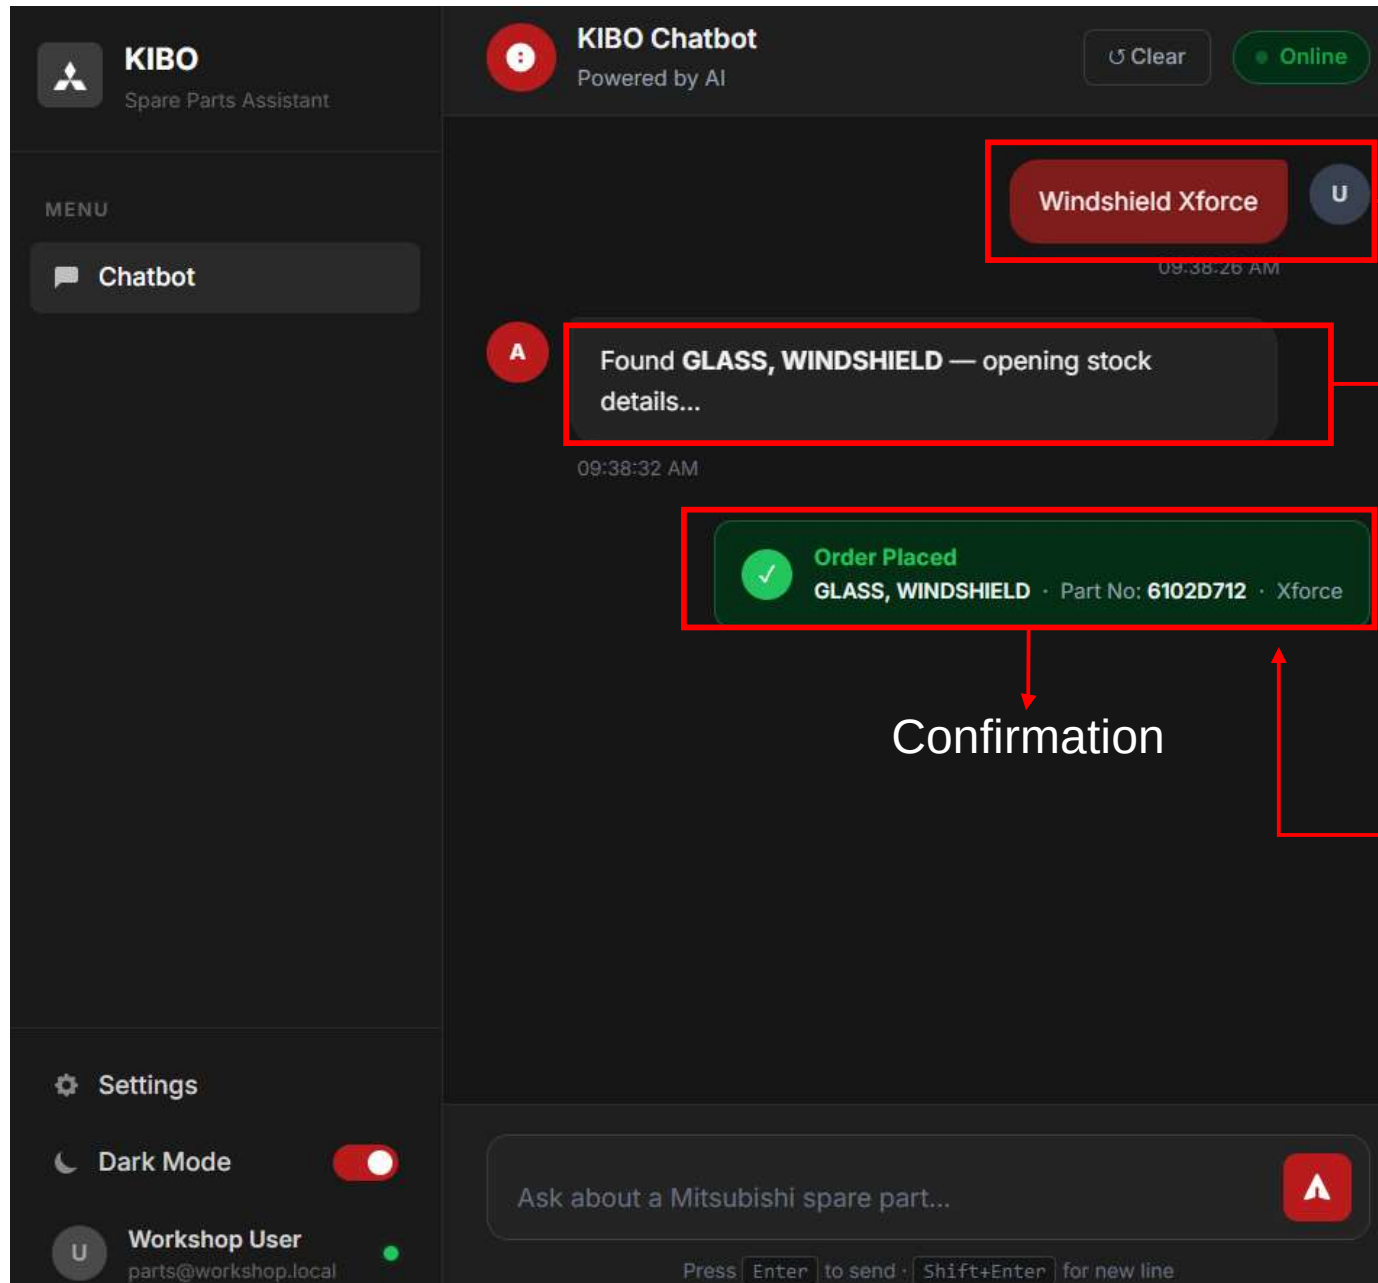

Aim is to ease the burden
and increase efficiency in
the workshop

How KIBO Works?

User simply write what is wanted from the car, KIBO will find and request what is needed

- Unit Available

User can Place Order

Scope of Project

1. Parts Number (Special ID for each Part) are still stored inside Documents (PDF/Unstructured Data) for each car type.
2. Stock Availability/amount is stored inside an SQL Database/Structured Format.
3. Each Part has unique ID
4. Each part currently is generated, not all parts are available in this test, only cars “Pajero sport,Xforce, Xpander” are available

Improvement Plan

01

Database Expansion

Increase more parts and car models in the database to expand vehicle line compatibility.

02

Order Monitoring Logs

Addition of request order logs and centralized monitoring of parts ordered across bays.

04

Authentication & Roles

Enforce secure user login states and strict access control configurations per workshop role.

03

Session Persistence

Implement multi-device support to ensure continuous technician workflows on field tablets.

Thank you
